COMPANY PROFILE

Company Profile

Watt technology is an intelligent manufacturing service specializing in the intelligentization, informatization and digitization of IoT automation equipment, integrating software and hardware development. The provider. The company has a production base, a complete set of resources for technology research and development and product manufacturing, and intellectual property rights such as core patents and software copyrights.

Spare mechanical design, sheet metal design, control circuit, control system, management software, product manufacturing, digital service and other full-process supply capabilities. In order to better serve users in all regions of the country and further reduce the use cost of customers, the company integrates advantageous resources in all regions and distributes the whole country. Group surrounding

With Shenzhen R & D center, Hebei production base and Jiangsu marketing center as the core, Ningbo, Qingdao, Zhengzhou, Chengdu, Chongqing and other regions have set up offices to enter

It covers all regions of the country and provides customers with all-round and high-time guarantee services!. Watt technology firmly believes that improving the efficiency of material management in an all-round way and intelligentization will be the trend of informatization and digitalization in all walks of life.

Close contact, and at the same time meet customers' "customized exclusive service", so that enterprises all over the world can use their own smart warehouses!

Leading Technology

Take the lead in automation machines, deep learning, and more
Application of global leading technologies such as sensing fusion

Body industry

Rich scenarios

Flexible digital and intelligent solutions

Requirements in different industries and scenarios

Rapid growth

For five consecutive years, the number of enterprise customers has increased exponentially, and the industry

Business continues to enter more industry fields

Customer Trust

Obtained China Zhongche, COFCO Group, Traditional Chinese Medicine Collection Group, Nanjing public service center, seven Zhongchuan

Such as the trust of state-owned enterprises and central enterprises

Government recognition

Obtained the government from Jiangsu, Guangdong, Hebei province

The award of key science and technology enterprises in the government has won various awards.

Strong support from level departments

Security Compliance

Obtained ISO27001 issued by BSI and ISO27701 dual authentication

Enterprise strength

20000 square meters
Production base

100 +

Intelligent tool bin

Product appearance	Specification parameters	Product Features
	Name: Smart mini spiral line side warehouse Model: L50 Overall size (length * depth * height): 950x755x1220(mm) Weight: 200kg Cargo channel capacity: 50 cargo channels Touch screen: 10.1 inches, support face recognition, card swiping, printer Extended knife: 1 Drag 4 Extended counter knife: it can be used in combination with the extension of drawer line and side warehouse.	Small and exquisite Matching minicomputer and enterprise knife gauge Model, simple function, moderate capacity
	Name: smart spiral line side warehouse 80 cargo Channel Model: L80 Overall size (length * depth * height): 950x930x1820(mm) Weight: 280kg Cargo channel capacity: 80 cargo channels Touch screen: 21.5 inches, support face recognition and card swiping Extended knife: 1 Drag 4 Extended counter knife: it can be used in combination with the extension of drawer line and side warehouse. Equipped with to connect material lifting platform devices	Matching knife gauge for medium-sized machines and enterprises Model, rich functions, single device Capacity up to 168 boxes Adapt to distribution consignment mode
	Name: Smart tool combination line side warehouse Model: L8050 Overall size (length * depth * height): 1290x930x1820(mm) Weight: 380kg Cargo channel capacity: 80 cargo channels Grid port capacity: 50 grid ports Touch screen: 21.5 inches, support face recognition, card swiping, printer Standard code scanning device; Inventory lamp device To connect material lifting platform device, auto switch middle door material taking Expansion cabinet: 1 Drag 4 Extended cascade: supports combination with drawer line-side warehouse expansion	Super capacity features Meet a variety of tool calendar requirements, More than more sizes material form support storage Save

Smart tool consumables warehouse

Product appearance	Specification parameters	Service features
	Name: Smart drawer line side warehouse Model: C80 Overall size (length * depth * height): 1300x680x1735(mm) Cargo channel size: 68: 100 x360x75 (length x depth x height) mm 8: 100 x370x165 (length x depth x height) mm 4: 250 x370x165 (length x depth x height) mm Weight: 350kg Main cabinet capacity: 80 channels Auxiliary cabinet capacity: 100 freight lanes Touch screen: 21.5 inches, support face recognition Card swiping, printer, code scanning device surveillance camera Expansion: 1 Drag 4	Match multiple varieties, multiple batches, multiple Overall storage of form materials and tools Store demands to meet most students Production, assembly and processing industry
	Name: Smart Grid Line side warehouse Model: G23 Overall size (length * depth * height): 2070x450x1810(mm) Weight: 240kg Capacity: 23 channels Cargo channel size: 300X390X300 (length x depth x height) mm Touch screen: 10.1 inches, support face recognition Swipe card, printer, scan code Expansion: 1 Drag 4	Fit large-size materials and tools Control of consumables High weighing precision Inventory warning, real-time statistics, Regular reporting and efficient inventory
	Name: Smart drawer compartment line side warehouse Model: C300 Overall size (length * depth * height): 1133x680x1246(mm) Weight: 350KG Capacity: 377 channels Cargo channel layer: 8 layers 35 grid × 1 layer: 160 x70x60 (length x depth x height) mm 66 grids × 2 layers: 126 x45x60 (length x depth x height) mm 42 grids × 5 layers: 126 x70x60 (length x depth x height) mm Touch screen: 10.1 inches, support face recognition Swipe card	Large capacity to meet various material consumption Intelligent storage of materials Precise control of one thing and one grid

Let enterprises all over the world use smart warehouses suitable for themselves

Intelligent scale heavy warehouse

Product appearance	Specification parameters	Service features
	Name: Smart Grid Line side warehouse Model: G13 Overall size (length * depth * height): 985x450x1735(mm) Weight: 230kg Capacity: 13 channels Cargo channel size: 280X390X300 (length x depth x height) Touch screen: 10.1 inches, support face recognition Swipe card, printer, scan code Extension: one drag 4 Standard weighing: 30kg/1g;5Kg/0.1g range accuracy	Meet the requirements of managing multiple specifications and sizes Material Storage Support for custom Cascading more port libraries The number of bits in the form of storage, suitable More extensive and diversified material management needs Seeking
	Name: Smart counting line side warehouse Model: J30 Overall size (length * depth * height): 1180x600x1750(mm) Weight: 300kg Capacity: 30 channels Layers: 6 layers Cargo channel size: 160X290X160 (length x depth x height) mm Touch screen: 10.1 inches, support face recognition Swipe card, printer, scan code Device surveillance camera Guide device: cargo channel indicator light Expansion: 1 Drag 4 Standard weighing: 30kg/1g;5Kg/0.1g range accuracy	Open the door, receive the door and close the door for settlement High weighing precision Inventory warning, real-time statistics, and determination Periodic Reporting and efficient inventory Refined management of enterprise materials Enterprises adapted to open material control Industry Scenario requirements
	Name: Smart drawer line side warehouse Model: C80P Overall size (length * depth * height): 1300x680x1735(mm) Weight: 350kg Main cabinet capacity: 80 channels Auxiliary cabinet capacity: 100 freight lanes Cargo channel size: 68: 90 x310x35 (length x depth x height) mm 8: 90 x310x130 (length x depth x height) mm 4: 240 x310x130 (length x depth x height) mm Touch screen: 21.5 inches, support face recognition Card swiping, printer, code scanning device surveillance camera Standard counterweight: 30kg/1g;5kg/0.1g range accuracy Expansion: 1 Drag 4	Meet the requirements of managing multiple specifications and sizes Material Storage Support for custom Cascading more port libraries The number of bits in the form of storage, suitable More extensive and diversified material management needs Seeking

Free combination of multiple cabinets to meet the unified and convenient management of multiple types of materials cost reduction and efficiency increase

INTELLIGENT TOOL MANAGEMENT

Intelligent tool management

The intelligent tool management system tailored for the machine factory helps the factory improve the workshop management level.

- 24-hour unattended
- Save 30% tool cost
- Prevent multiple collars from leaking collars
- Master the tool status anytime and anywhere
- Automatically generate tool reports

Traditional tool management to digital tool management

Previously

Intelligent tool management

It is chaotic and unable to find the required knives in time. Special person management, high labor cost

VS

Now

A smart knife cabinet is enough

A tool cabinet manages all tools,

Neat, 10 seconds to complete

Traditional tool management to digital tool management

Previously

Prepare a knife every day and take care of it in three shifts.

Unable to accurately prepare the knife, break the knife, return the knife in time, etc,. Unable to handle, affecting normal production

VS

Now

24-hour unattended on-demand

Support employees according to personal needs, equipment needs and products. Need to quickly get a knife, day shift, night shift colleagues seamless handover

Traditional tool management to digital tool management

Previously

If the tool is lost, borrow it or not

The person who uses the knife can throw it at will, and the knife consciousness is low, and the knife is wrong. Collar leakage collar collar collar loss occurs from time to time

VS

Now

Automatically record the whereabouts at any time

Support employees to quickly get knives according to personal needs, equipment needs, product needs, day shift, night shift seamless handover with colleagues

Record (Chen Hao)

Traditional tool management to digital tool management

Previously

Manual recording takes time and effort to check one by one.

Manual recording of tool usage records, manual inventory, time-consuming and laborious,. Data confusion is prone to errors.

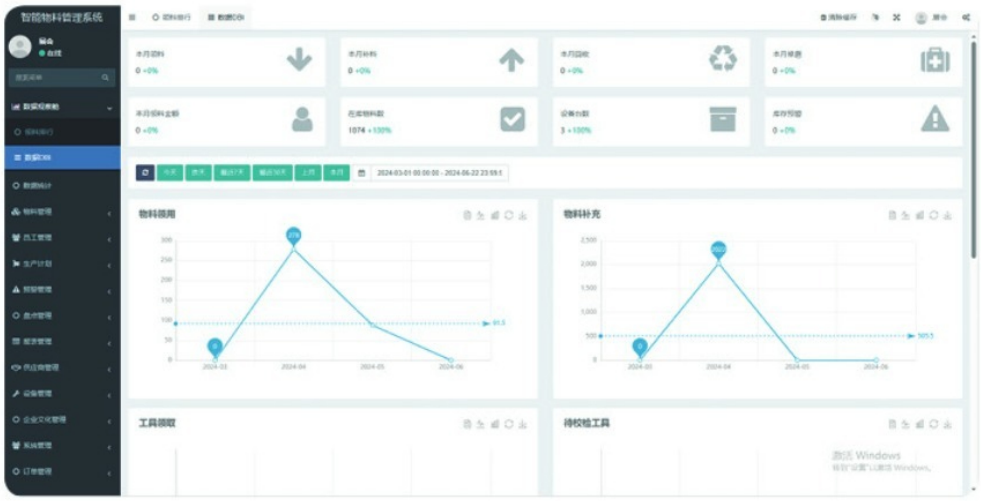

VS

Now

Real-time inventory inventory of multi-dimensional flow reports

Real-time adult students, machines, objects, etc. enter and exit various reports. There are several reports that can be relied on, and the source can be traced back.

Traditional tool management to digital tool management

Previously

Cost consumption and human-machine benefits cannot be evaluated.

Employee efficiency evaluation, cost consumption data, tool quality, human

It is not objective and scientific to judge data such as labor efficiency output.

VS

Now

Human Performance Evaluation of visual data analysis reports

Employee material ranking evaluation list, daily weekly monthly cost real-time calculation and display, human-machine input production benefits and other data analysis section. Decision-making basis of learning

Features help tool management be more efficient

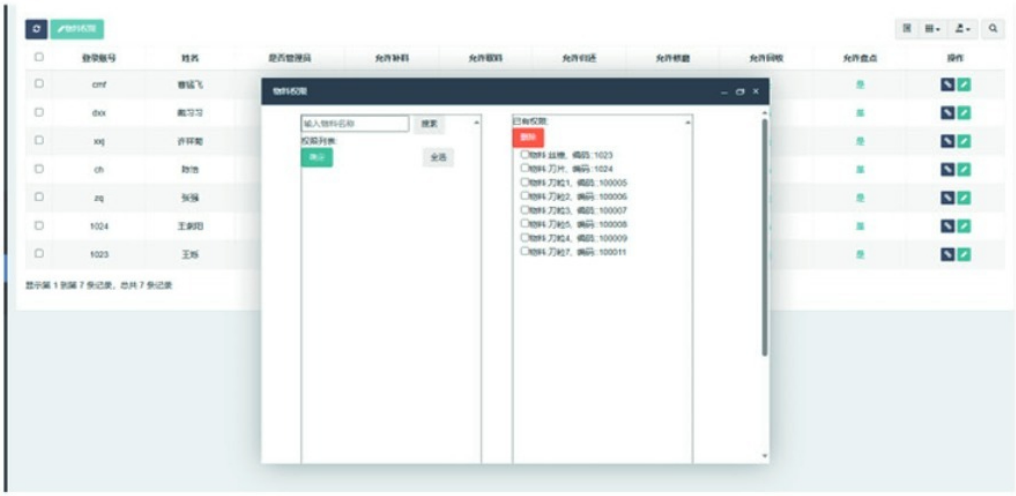

Permission management quantity control

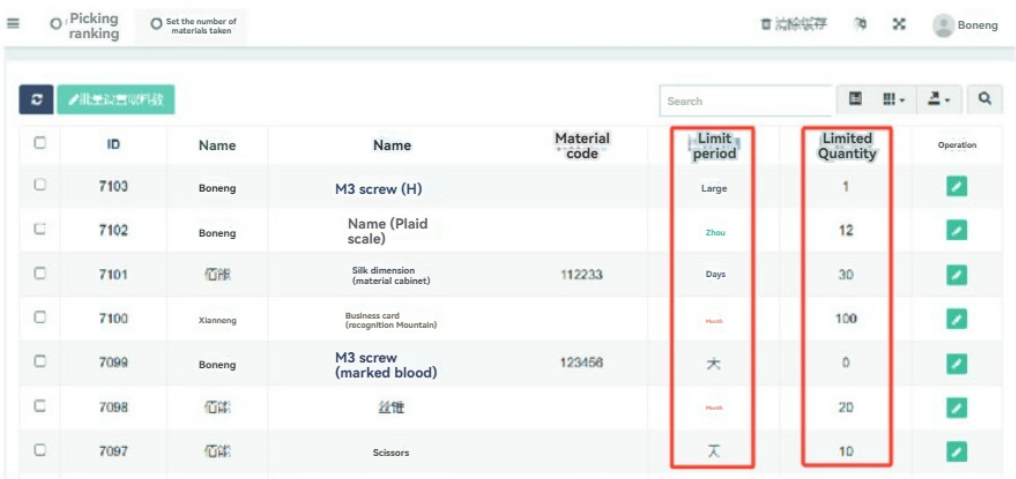

Employees lend a certain number of unreturned knives,. Limit its continued use. Employee Group Management,. Set up collars for different groups of employees

Urge employees to return the knife in time,

Improve the fine management level of the workshop to prevent staying

Delayed material generation

ID	Name	Name	Material code	Limit period	Limited Quantity	Operation
7103	Boneng	M3 screw (H)		Large	1	
7102	Boneng	Name (Plaid scale)		Zhou	12

7098	佰能	丝锥		Month	20	
7097	佰能	Scissors		天	10	

Features help tool management be more efficient

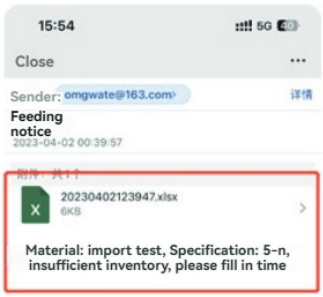

Email alert notification

Inventory light warning

The system automatically pushes the tool inventory status regularly,. It is helpful for administrators to apply for purchasing replenishment in a timely manner,

Ensure the production schedule is on time

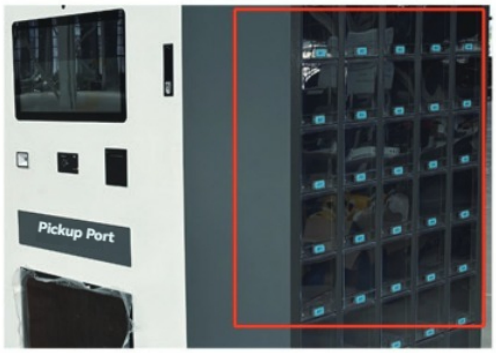

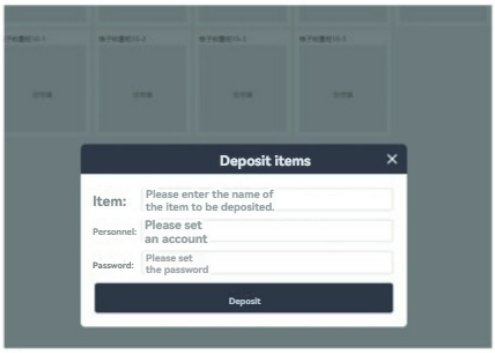

Features help tool management be more efficient

Multi-purpose Cabinet

Public temporary storage: the use of public goods can be traced back to personal temporary storage: it greatly facilitates employees to store measuring tools, calipers and other items. Counter knife bin: some long, large knives/tools/materials can not be put in the spring can be placed in grid cabinet counter knife bin receiving situation can be automatically recorded

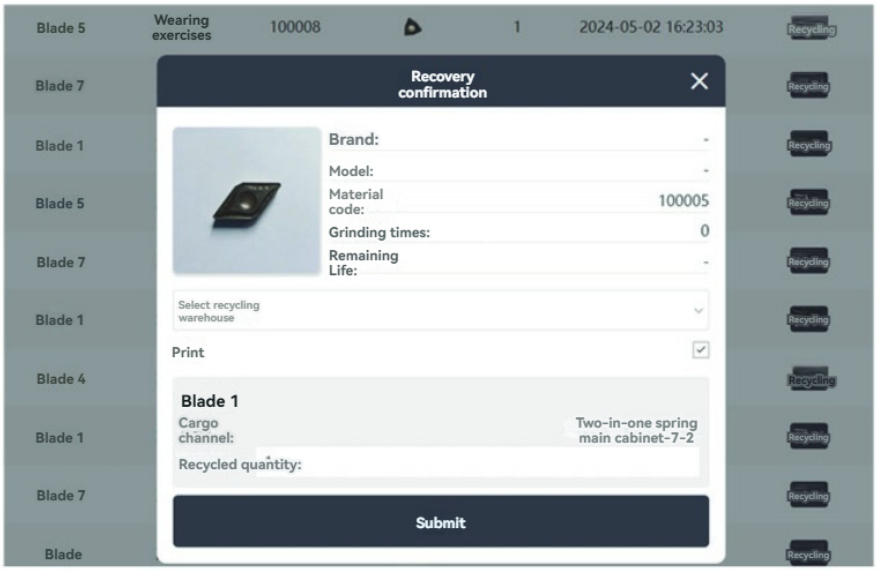

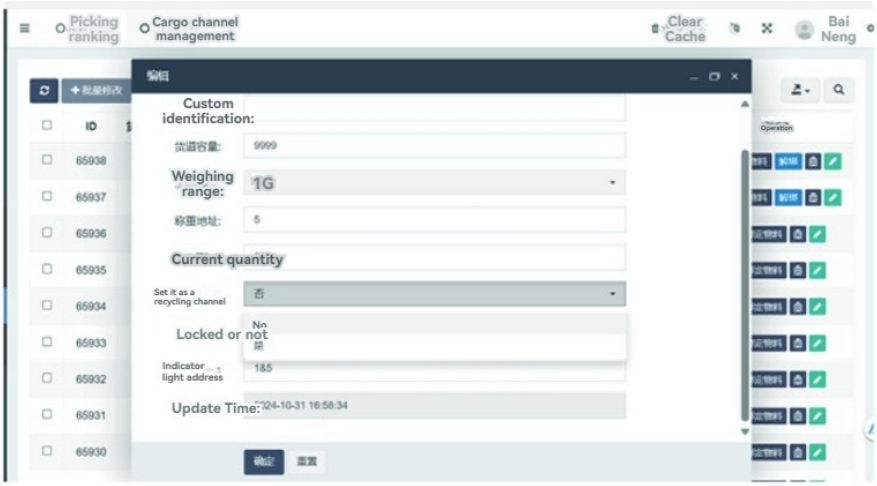

Features help tool management be more efficient

Grinding warehouse and recycling warehouse

According to the needs of tool management, the tool manager can set the cutting Cabinet grid to expand to recycle bin grid for grinding at any time. It is beneficial to maximize the management function of the tool cabinet, and the tool management is more flexible and variable, allowing you to maximize the tool management requirements at low cost.

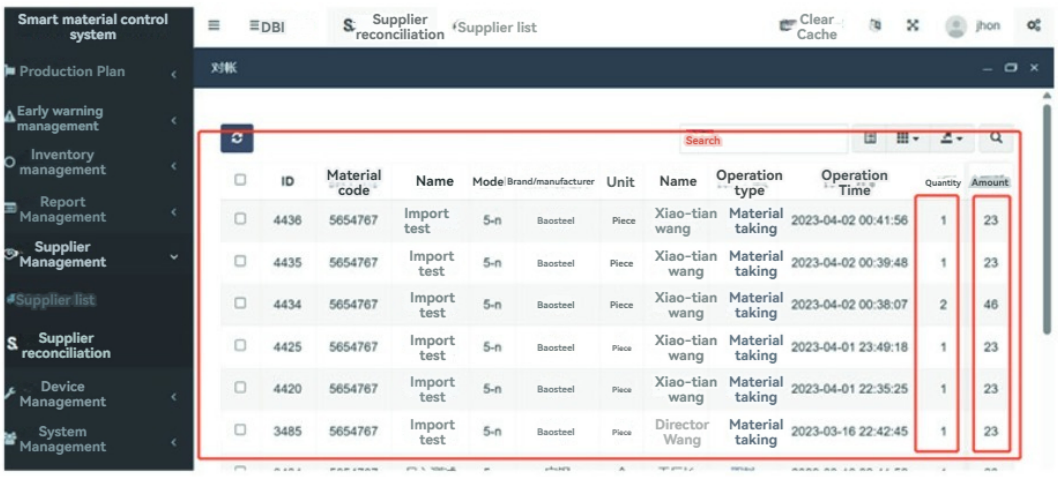

Features help tool management be more efficient

Clear cost reconciliation

The cost of material consumption is clear at a glance, and the supplier's tool consumption reconciliation can be seen at a glance!
Account, every day, every week, every month, no nonsense

INTELLIGENT TOOL CONSUMABLES MANAGEMENT

Intelligent tool consumables management

Intelligent tools/consumables/spare parts management system tailored for manufacturers to help factories improve workshop management level

- 24-hour unattended
- First-in-first-out real-time warning
- Effective control of permissions
- I will return it as soon as I receive it, and there is an account in and out
- Visual statistical reports
- Help corporate culture propaganda
- Accurate identification of consumable tools
- One-stop management of diversified materials

There is a bill to go in and out as you borrow-save money

Previous management

3 warehouse management, 24-hour shift, high personnel cost,. Low collection efficiency

Intelligent management

The workload of the warehouse administrator is reduced by more than 60%. The work that needs 3 people to complete is reduced to 1 person.

Manage all large and small materials-save trouble

One-stop management of materials of different sizes and specifications

Light, heavy ones can be put down

Through different cabinet types and different grid storage space, it can meet various requirements. For materials with specifications and sizes, unified management and unified access can be realized. The inbound and outbound streams are uploaded to the digital management platform to realize automatic computing,. Automatic data marking

There is a bill to go in and out as you borrow-save money

Previous management

· It takes 60 seconds/time to fill in the registration;

· Frequent registration, missing records, different sizes

Intelligent management

The material is collected and returned in 5 seconds, and the statistics are automatically recorded;. · Automatic Records, which can be traced back to query the collection time and user information of the corresponding measuring tools, generate collection and return records in real time, and can be queried.

No one can change it

(Chen Hao)

Effective control of permissions-save money

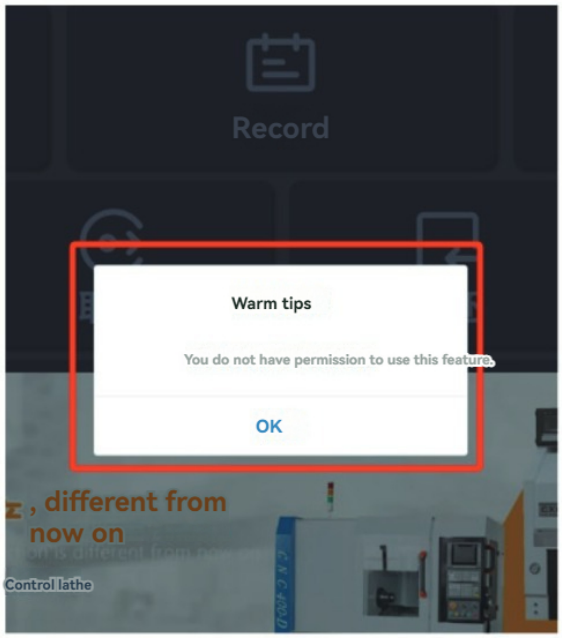

Previous management

· Forget to return, difficult to trace back, often lost; · Each inventory is lost, with losses ranging from 5 to 100000.

Intelligent management

· There are records and traceability, consumables, and the abnormal loss rate of tools is as low as 0;. · Record the time, personnel and other binding content in detail to prevent the phenomenon of wrangling;. · You can set the employee's material collection authority and quantity limit to eliminate waste and save labor costs, prevent tool loss and reduce factory management. Cost, realize fine management of tools and materials, and reduce capital occupation

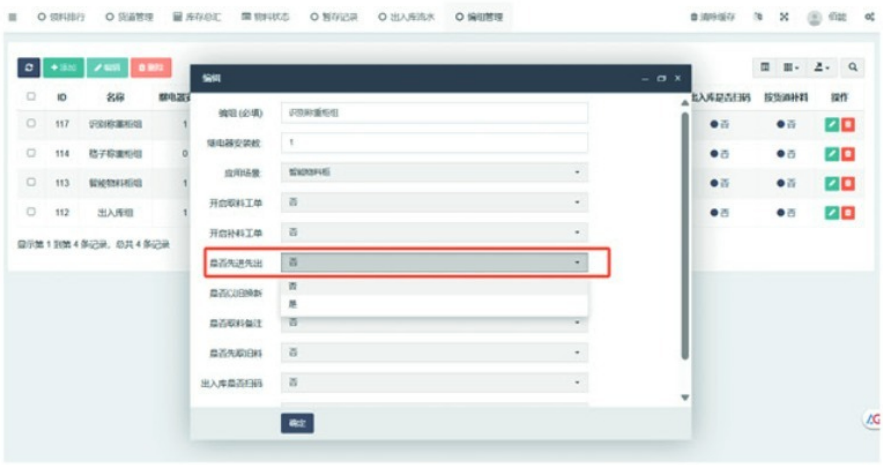

First-in-first-out real-time warning-save trouble

Previous management

A pile of old materials piled up, and new materials were used up, resulting in. The cost rises and the scrap rate remains high. · Insufficient materials, temporary procurement, employees have nothing to do, production. The temporary shutdown of the line and other materials have greatly affected the production efficiency. Rate

Intelligent management

· Use to achieve first-in-first-out, give priority to using old materials and guarantee. Reasonable Consumption of barriers and virtuous recycling of new and old materials. · Daily production flow list, pay attention to daily inventory for production. Consumption situation; Real-time inventory warning, notification to warehouse management, mention. Pre-feeding to ensure daily production, non-stop work, no stop production

Visual statistical reports at a glance-decision assistance-saving

Previous management

· The Monthly Statistical Report takes a long time, the data is inaccurate, and the number

There is a postpositional nature;. · Originally, manual registration and EXCEL search were used.

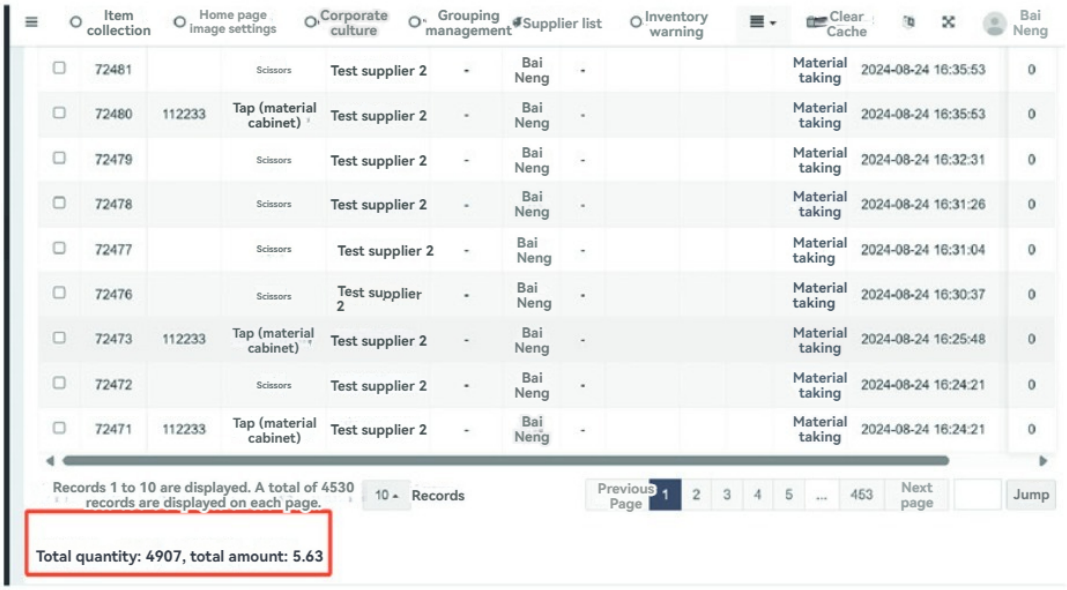

Control, time-consuming and laborious, and need to be managed by special personnel

Intelligent management

· Automatically generate reports, purchase, verify, and scrap costs 1

Eyes;. · Greatly improves the collection efficiency and reduces the generation of reports.

From now on, there is no need for special personnel to manage

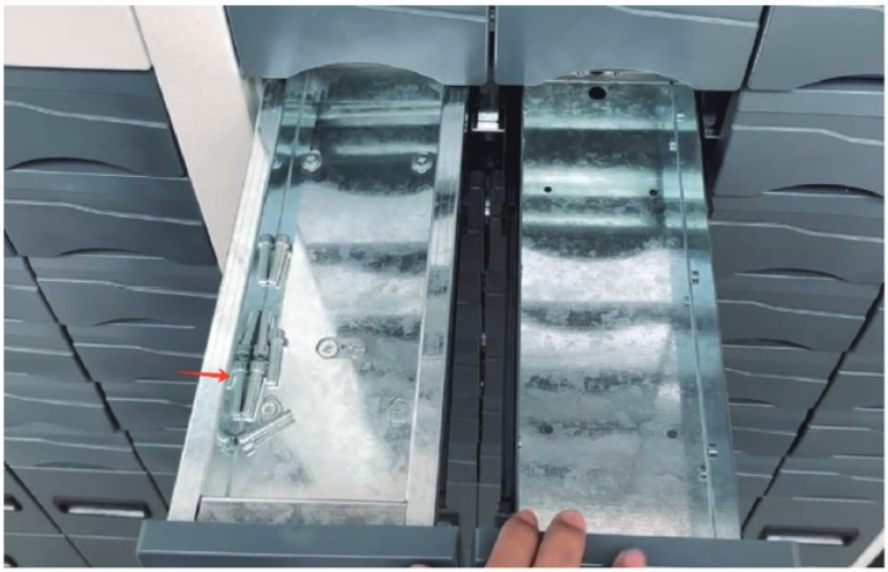

Accurate identification of consumables tools-save trouble

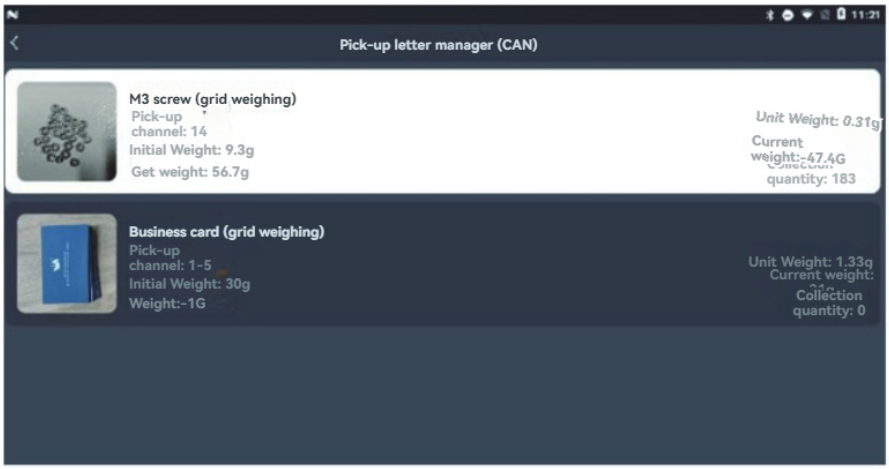

High-precision gravity sensing

1G and 0.1G are called out

Messy placement can also accurately weigh

Through high-precision gravity sensor, real-time monitoring of the weight quantity of goods Channel materials, real-time calculation of the number of employees, how much they use and how much they use.. Upload to the digital management platform synchronously to realize automatic inventory counting and reduce manual inventory time, energy and counting errors.

Help corporate culture propaganda-enhance employees' sense of belonging

Deepen the corporate culture into the production line of the first-line Workshop

Holiday notice and internal announcement issued in real time

Enterprises can upload pictures, videos, etc. as needed to publicize their own company's various matters.

We can connect with mainstream business system software such as ERP, MES, and WMS.

Customer site case

CUSTOMER CASE

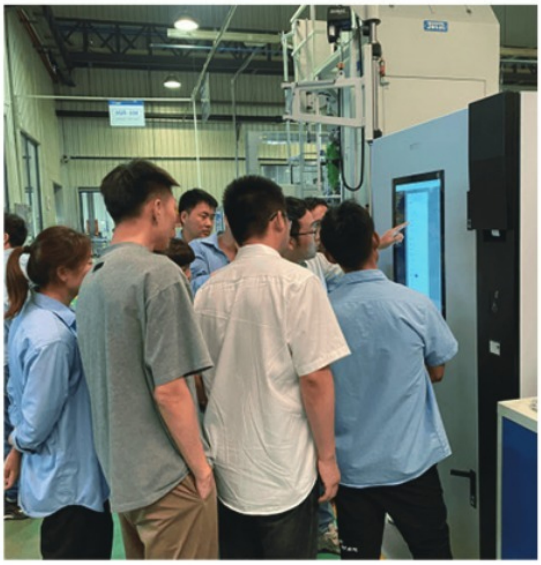

Customer Case

-30% Storage cost reduction

+40% Improved circulation efficiency

+50% Data accuracy

A mechanical processing enterprise in Henan was established in 1999, and Taiwan has already owned it. 30 years of processing and manufacturing experience, with exquisite technology, and then rely on it. Top processing equipment, strictly guarantee the processing precision, production and manufacturing. The MES of the line system is digitized to realize 24-hour monitoring with high quality,. Short delivery period, perfect after-sales service and many other advantages, serving customers. Under the wave of digitalization, the lean management of cutting tools is becoming more and more. The more attention you pay.

Customer Pain point

· It takes a long time to get a knife. In order to keep up with the production plan, employees often need to run all the way and go to the warehouse to register and receive a knife. The administrator checks it every day. Data.. · The input and output of various tools every day, and the secondary analysis, spending a lot of energy

Solution Scheme

· Place the tool cabinet at the edge of the production line so that employees can quickly and easily pick up the tool. The tool cabinet system automatically records the type, quantity and personnel of the tool, and real-time statistical reports

Feedback Effect

It is very convenient to use this. I can handle the collar knife and the statistics by myself.

-- Miss Wang, warehouse keeper

-30% Storage cost reduction

+50% Improved circulation efficiency

+40% Data accuracy

Guangdong well-known motor group started its business in China in 1995,. It is a partner of the international automobile industry and has more than 80 automobiles worldwide. Manufacturers and more than 30 suppliers provide door systems and trunk doors. System, seat frame and electronic drive system, etc. There are many cost centers,. Inventory trouble Nan operation, material picking process is complicated, divided into white night shift, day shift. Personnel need to collect the night shift materials in advance, resulting in cumbersome picking,. There is a need to control costs.

Customer Pain point

· The warehouse keeper manually registers the material collection records of the employees, and the data collected is inaccurate, and the monthly statistical inventory is difficult;. It often occurs that employees receive and receive multiple orders repeatedly, and the material waste is serious, and it is impossible to supervise the irregular behavior of employees;. Thermocouple, titanium alloy, nozzle and other valuable consumables are frequently used, and are managed and distributed by the warehouse keeper in a unified manner. The workload of the warehouse keeper is heavy and cumbersome.

Solution Scheme

Material statistics and sorting, placing a chest of drawer and weighing material cabinet cabinet in the workshop to manage common and valuable materials;. · Material cabinet 24-hour unattended, employees are on-demand, and special personnel manage costs;. · Set up the picking authority for each employee and strictly control the quantity and type of the employee picking;. · The data system used by employees is automatically recorded, the data is accurate and visible, and the monthly inventory and annual inventory are easily handled.

Feedback Effect

No one needs to come and see that it is much more convenient to send materials every day, and the waste is much less every month.

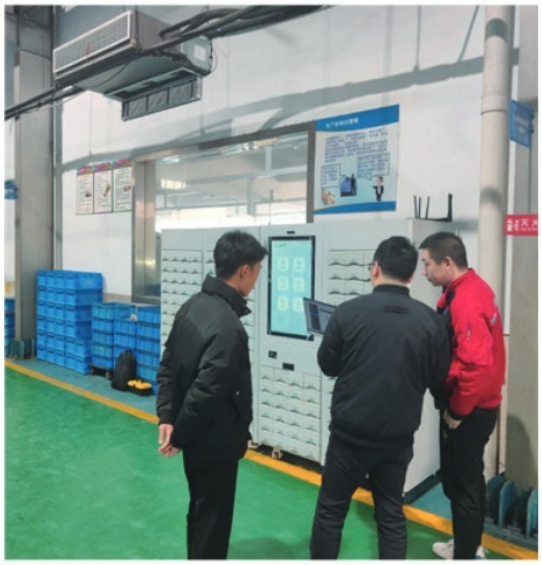

-- Director Liu, workshop supervisor

-20% Storage cost reduction

+40% Improved circulation efficiency

+50% Data accuracy

Jiangsu Electronic Technology Co., Ltd.: to develop and produce new types of electricity. Sub-components are mainly (chip components, sensitive components, and mixing. Integrated circuit), the company's main customers are G.E, NEC,. IBM,APPLE,FOXCON,SONY, WHIRLPOOL and other international. Giant electrical appliance manufacturers, etc., with numerous materials, complex specifications and picking materials. The process is complicated, and the night shift is divided into white shifts. The day shift personnel need to transfer the materials of the night shift. It is used in advance, resulting in cumbersome material picking and cost control requirements.

Customer Pain point

There are many kinds of accessories, small size, messy storage in the warehouse, and it takes time and effort for warehouse managers to make daily inventory, and they cannot know the actual inventory of each accessory in time;. · Employees receive equipment accessories frequently, and each time they need to spend a certain amount of time to receive the corresponding accessories;. · Exclusive and dedicated accessories are not stored in a standard manner and are often scattered, making it difficult to collect them.

Solution Scheme

According to the frequency of material usage in its workshop, it is equipped with 2 intelligent material cabinet, with 204 storage locations in total, which are used to place and manage all accessories;. · The background automatically records the usage of various molds and checks the inventory of each mold in real time;. · The warehouse keeper does not need to specially manage the employee to collect the mold, and the employee can collect and return it by himself, and it only takes 30 seconds to collect it at a time;. · Unified specification batch management, employees receive one batch at a time

Feedback Effect

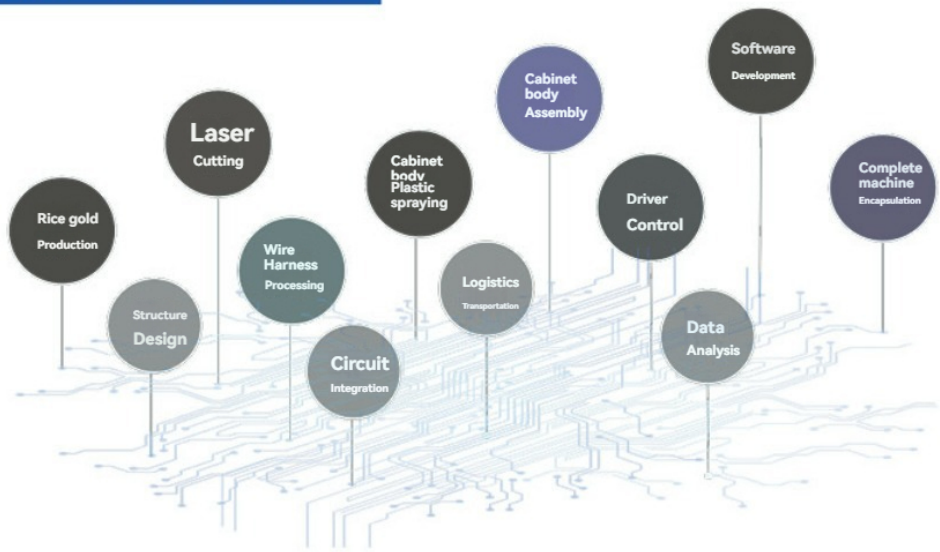

With this material cabinet, there is no need to worry that the mold can't be found to affect the production.

-- Mr. Cheng, warehouse keeper

SERVICE GUARANTEE

Service Assurance

Service Guarantee-supporting independent industrial chain

Service Guarantee --- buy at ease

Free software updates

We provide free software update service and regularly introduce new products. Version, including function optimization, vulnerability repair, etc. Free system interface allows customers to easily manage data.

Hardware failure replacement

Provide hardware failure replacement service. If the device fails,. After confirmation, new products will be replaced free of charge to quickly solve the problem and guarantee it. User experience.

Demand-driven R & D

Collect real customer feedback and needs in real time and identify customers. Optimize our products and accompany our customers

Grow together.

Customer Training Service

Provide customers with professional one-on-one training services, covering production. Product knowledge, usage and other content to help customers better

Master relevant skills to improve the use effect.
